introduced on August 24, 2006 a completely new approach for all AutoCAD-related files which will be part of the next release of AutoCAD. It is referred to as the NEW/ADVANCED DRAWING STANDARDS (NDX) XML file format. The new format consists of a XML-based archive, with its directory structure based on filenames and its hierarchical file system structure based on directories. The former are standard XML files with extension ".ndx", and have a ".dxf" extension for their ZIP archive equivalent. AutoCAD DXF format in 2016 Supported Viewers Microsoft Office Microsoft Office 2007 and later versions support AutoCAD drawings in a file exchange format known as DWG. This requires that AutoCAD be installed on the user's computer and is not available for general download. Note that MS Office stores the DXF format files in its AutoCAD repository by default but does not open DXF files that are not associated with AutoCAD drawings. Some non-AutoCAD applications have native support for opening DXF files. Microsoft's AutoCAD 2008 was the first version of AutoCAD to provide support for the new NDX DXF format. Other versions continued to support the older ZIP format. Support for the DXF format is also available through the AutoCAD Exchange app that is part of the Windows Live SkyDrive.
