Markup Assist is a feature that helps you to gather feedback from your customer during development. You can send feedback directly to the source of your design by adding comments and marks to it. Drawings will be marked up as soon as they are created. The marks you add can be extracted automatically and incorporated into your drawings in later versions. (video: 1:43 min.) Markup Assist helps you to monitor progress on a drawing during development. The design document can be compared to the actual drawn design, making it possible to identify changes that need to be incorporated. (video: 1:19 min.) The design assistant for Markup Assist is especially helpful in early prototype drawings, where time is short. It can automatically find lines in your drawing and link them to the corresponding lines in your design document. The import of those links can be viewed and edited in the designer. Link, Escalate, and Sync: Create links that open, close or hide elements in your design. One link can be linked to another, without updating a specific element. Create and use Escalate Links to automatically raise certain elements to a higher level in your project hierarchy. Sync links can be used to hide, unhide or restore a linked element, based on changes to its associated elements. These new Link, Escalate and Sync functions let you dynamically change the appearance of your design based on your customer's feedback. Escalate Links can be used to make changes to a design, but only after the changes have been reviewed. (video: 1:50 min.) What's new in drafting & annotation Adding, removing, resizing and changing fonts: Edit text more efficiently by using the AutoCAD drafting features. Quickly add, remove and resize text. Change the font in the AutoCAD toolbar, without using the Font dialog box. The new text tools help you to create text objects without much additional drawing work. You can easily modify existing objects and reuse them. New features like a find tool that displays previewing text make it easier to edit complex objects. (video: 1:51 min.) Creating and using annotations: Annotate drawings and the project viewer with notes or comments. Drag annotation tools and symbols directly onto the drawing canvas.
