While driving through Russia, I was struck by the many changes. I saw a mixture of modernity, architectural wonders, and cultural richness. I saw a country that was struggling with its identity, but was still moving forward. Russia is more than

## What's New In?

With the rapid growth of our field, there has been an increased emphasis on quality in the graphics and 3D design industry. It is critical that the work produced by our profession be of the highest quality. By combining the highest quality software and your own individual creativity and talent, we hope to advance our profession and be able to improve the standard and quality of work. Many drawings are created in a silo, independent of any other application. This can cause an issue when you want to make a change to something in the design, but need to track it and make sure it is consistent. You can't do this on paper with a pencil or marker or even by cutting and pasting the design into a new drawing. You could copy the entire document, recreate it in a new drawing, or open up multiple drawing documents and try to follow the changes manually. But even if you did this, you might make a mistake, and if you're using only one application and a single version, you could end up with a different result than what the designer intended. If you're making small changes to a drawing multiple times, using multiple apps, or opening multiple versions of the same document, the process can become tedious. Now you can start building the correct elements of the design right in AutoCAD, and incorporate those changes into the model with just a click. Open or create a drawing and select the Markup Assistant (View tab > Markup Assistant > Markup Assistant). A taskbar will appear on the right, where you can see the tasks and jobs that are available for you to do. On the left side of the Markup Assistant, you can see the list of options that can be assigned to a task. You can add edit, or discard a task, or create a task directly in the Markup Assistant. To add edit tasks, select the Edit Task button. To add discard tasks, select the Discard Task button. To create a new task, select the Create Task button. You can add markups to drawings by adding a task and clicking the Add button. You can add text, a picture, a vector shape, an object, and a 3D image. You can also add text styles, picture styles, and object styles. To create a new task, select the New Task button. You can set the name of the task and assign the tasks
