Phinix is a small audio player that allows you to listen to your favorite tracks. It works out of the box, but comes with a handful of options to help you set your personal preferences. While playing, a control panel is displayed on the main screen, allowing you to manage playback, and build your own playlists. Let's start from the basic configuration. Phinix doesn't need a whole lot of installation, it can be run from its own desktop shortcut without requiring any additional programs. Click on the "Start" menu, and type in "Phinix" to bring up the executable. Click "OK", and it's off to the Playlist manager. You'll be greeted with a standard panel. You can choose to display the album art on the panel, but you won't get any song info other than artist, and title, like playback time, or genre. Album art is supported, and will be displayed if available. You can also choose to show song info, along with playback progress. Song info includes the genre, and media type, while playback progress includes a timer to show song length, and the speed of the playback. Some of the more advanced features include the playlist file support, which lets you create M3U items from the file manager. You can drag and drop multiple items at a time, and Phinix will create a playlist with all of them automatically. Additionally, playback can be paused and restarted with a simple click, while playback and audio volume can also be adjusted through the control panel.
