JetBoost Free Download [Mac/Win]

Please read the FAQ before asking questions as this is how our users found the software to be of help in resolving issues they had with virus and malware in the past. For your convenience here are a few of the frequently asked questions asked by our users. Installation/Uninstallation of JetBoost Q: How do I uninstall JetBoost? A: Double click on the uninstall.exe and follow the instructions. Q: How do I run JetBoost? A: Double click on the JetBoost icon on the desktop, or if you do not have an icon created, run it from your start menu. Q: How do I activate the trial version? A: If you do not already have a JetBoost license key, you will be provided with one. The key should be attached to the activation email you receive upon completing the purchase. Q: How do I make a backup copy of JetBoost to use when I uninstall? A: There is no need to save a backup copy of JetBoost when you uninstall JetBoost. Q: If I want to reinstall JetBoost again in the future, what do I do? A: When you reinstall JetBoost for the first time, you will be prompted for your license key, which you will need to provide in order to activate JetBoost again. Q: What is included in the JetBoost? A: At a minimum, we provide a free 60 day trial version that allows you to safely test JetBoost before making a purchase. Q: I already have a license key, how do I activate the software again? A: To activate your software, please use the key sent to you in your email with the purchase order. The license key can also be found in the licensing file, and will be in the same format. Q: What are the licensing terms for JetBoost? A: JetBoost's terms of use are as follows: You may use only one copy of JetBoost, and this must be kept on a single, dedicated, unformatted drive (e.g., an external USB drive). You must not use JetBoost in a multi-user (multiple person) environment. You must not sell, give, or otherwise make available to others the materials used to make the JetBoost. This includes making the JetBoost available over the Internet. You may not download or use the JetBoost without the express written consent of T

JetBoost Free Download

JetBoost is a performance booster that allows you to maximize the power that your computer is capable of by shutting down unnecessary processes and services. There are several situations where the presence of JetBoost could make a huge difference; activities like playing a game or working on a CAD project could turn into a challenge for your computer, especially if its resources are being used by some other process. With JetBoost, you will be able to make the most of your computer by setting it to pay less attention to some of the running applications and forcing it into focusing on what you're currently working on. It comes wrapped up inside a simple, yet elegant interface that allows you to customize various scenarios for boosting the performance of the system. First and foremost, it detects active processes together with their footprint on the CPU and memory, allowing you to shut down immediately the ones that are taking too much advantage of the resources. It also includes a list of the most common Windows services that are often running in the background without being of essential importance and therefore, can be turned off in order to gain power. Another set of tweaks allows you to have the application clean the RAM and the clipboard periodically, as well as to disable automatic updates that tend to interrupt you from your activities. Any changes you make are reversible, JetBoost being able of bringing your computer back to the exact state prior to the modifications. Overall, JetBoost makes a good impression by the freedom of choice it gives you in so many aspects. The scenarios are highly customizable and the changes can be undone, which is more than you can ask for. Key Features Simplified interface Highly customizable User-friendly Registry-based options Highly efficient in terms of resources Block started processes Block others that consume RAM Block programs that keep running Block programs that use the clipboard Block others that disconnect from internet connections Anonymity-protecting features Registry-based options Compatibility with Windows 7, 8, 10 and XP Maximum compatibility Customizable Blocks the startup of services Allows you to customize firewall settings Allows you to bypass Windows Hello for authentication purposes Setting up is simple Modify all at once or step by step Open file to edit Save file LED Colormap is a tool for changing the color depth of your screen to a different value. You may also be able to display the colors of your screen in different ways, including changing the color saturation, and changing the brightness 77a5ca646e

JetBoost Download [Latest-2022]
