Google has partnered with a major Australian bank to trial a system that could theoretically put Australian employees in a position to block unwanted payments from their bank accounts, with no human intervention. Instead of turning the tap on for the money — in the traditional sense — the company's new system taps into the bank's existing system, and turns the tap on at will, based on a notification from Google. People would need to download a Google Chrome browser plug-in to make the system work. And there are some privacy concerns, as well. What's happening? A recently launched banking app called Fi, which went live in the Australian market in May and is now available in New Zealand, will soon have a feature dubbed "Autoscan" that allows an account holder to set up alerts for non-approved transactions. Once the alert is triggered, Google would notify the bank that the transaction is going through and would take on the responsibility of blocking it. But the bank's existing systems could also be tapped into, via the Google system, and if the bank gives permission, it would take on the responsibility of removing it. "In theory, if an alert is received, it can then be removed and, depending on the bank's rules, the payment may be processed again," Fi co-founder Marco Gericke said. "If the bank allows it to be processed again, then it can then be re-presented to Google." "The challenge would be if the bank then says 'ok, but we don't want to remove it, we just want to send it back to Google again and you'd have to deal with that situation," Gericke added. Why is this happening? People are increasingly unhappy with the value of their bank accounts and what they perceive as excessive fees. And Google is using its power to create something that's not a bank — a payment system. The company's revenue-generating arm, Google Pay, is now accepted at more than 200 stores in Australia. Notably, that list doesn't include some banks, such as the Commonwealth Bank, which has a digital wallet available for customers but stopped rolling it out nationally last year. But, like the Commonwealth Bank, the new system will have to prove itself and has set itself a goal to connect with a minimum of 1 million Australian customers. "We'd like to think it's going to be over
