Baixar Gta Iv Super Compactado 875mb 2012golkes . a API .Q: A complex number satisfies $|z^2 + z + 1| = |z^3 + z^2 + z + 1|$. Find z . I need some help with this problem. The first part of the problem seemed simple: I used the Heron formula to find the minimum and maximum. So we have: $\sqrt{\left(\frac{z+1}{z}\right)^2 - 1} \leq |z| \leq \sqrt{\left(\frac{z+1}{z}\right)^2 + 1}$. It follows that $|z| \leq 1$, and I plugged these bounds into the original problem, found the minimum, and then plugged that into the quadratic equation. I got the roots $z = \frac{1 \pm \sqrt{5}}{2}$, and by plugging the second root into the original expression, I got the final answer of $z = \frac{\sqrt{5} + 1}{2}$. So I'm 99% sure I got the solution. However, the homework does not specify that I should use the Heron formula or otherwise find the minimum or maximum. I know it's guaranteed to have a real solution, but I'm just not sure of how to find the correct solution. Thanks! A: For a complex number z , the magnitude $|z|$ is defined as $\sqrt{x^2 + y^2}$. Using this, we have $|z^2 + z + 1| = \sqrt{(z^2 + z + 1)^2} = \sqrt{z^4 + 2z^3 + 3z^2 + z + 1} = \sqrt{(z^2)^2 + 2z^2 + 1} \cdot \sqrt{3} = \sqrt{3}|z|$. Now consider $|z^3 + z^2 + z + 1|$. We have

$$\begin{aligned} |z^3 + z^2 + z + 1| &= \sqrt{(z^3 + z^2 + z + 1)^2} = \sqrt{z^6 + 2z^5 + 3z^4 + 4z^3 + 3z^2 + 2z + 1} \end{aligned}$$

Baixar Gta Iv Super Compactado 875mb 2012golkesQ: Serving text data in a Neo4j label vs. property I am reading up on Neo4j and have seen this at least two times in text documentation when it comes to labels and properties. The data is set to a label and properties are defined for it. However, the property names are just the same as the label. I would expect property names to be a string while the label names would be an identifier. Label and Property name are both defined like this: CREATE (:my-label {name: 'John Doe'})-[:has]->(:my-property {name: 'John Doe'}) I would expect the label name to be x_MyLabel_JohnDoe and the property name x_MyProperty_JohnDoe. Is this a bug or is this correct? I have seen the same behavior also in the SPARQL documentation. A: In labels, the prefix is "x_" for property names and "p_" for variables. Regarding your SPARQL query, this should not be a problem. In the following query, 'vrd' is a variable provided by SPAR
