What's new in Dusk Diver 2 DLC - Summer Swimsuit Set 1:

-5 - Available NOW I am very happy to announce that I am working on the first DLC set for Dusk Diver 2. This DLC set contains the Summer Swimsuit set I mentioned in my last email. For those of you who are not familiar with Dusk Diver 2, it is a multiplayer adventure RPG game available on Windows, Mac, Linux and Android. One of my Patrons got me an account so he can play with me and he asked me if I could put bikini's in the

game. I had not planned on doing this. But I asked him what swimsuit would he like to see in the game and his answer was literally any swimsuit and they are all sexy. I obliged. I'm not in love with any of the designs, but they are very sexy. You will need to have Steam installed in order to play this DLC. This is currently the first DLC available for the game. This list will be updated monthly to show what is available. If you would like to see something added to the list please write to me and I will try my best to make it happen. To all of you again please purchase my games only through my web site: Monday, 29th of June, 2016 Dusk Diver 2 Patch I have checked into Bugging Out and found the second update for Dusk Diver 2. This update fixes a number of bugs for the game, adds a couple of utilities, and it fixes the two issues that were reported in the last email. Dusk Diver 2 0.8.0 has been uploaded to the various distributions. It looks like Ubuntu has made a mistake in their version numbering and has become confused about which version of Ubuntu they should be talking about, thus they have decided to name the Ubuntu releases after the date of the release. The release date that they were referring to was June 20th, so they decided to refer to the 0.8.0 release as the June 20th release. Both Patrons of the game have received emails and both of the Patrons are happy with this. I have been talking with them about what exactly the correct version numbers should be and we have come to the conclusion that in our case the correct version numbers are the unofficial Ubuntu releases, so instead of the Ubuntu 16.04.1 release the correct version number for the 0.8.0 release is 0.8.0.10
