The player is now much more agile, with the ball. Players can accelerate and decelerate the ball intelligently, perform double step-overs and unpredictable ball fakes. The system constantly analyses the player's physical movements and adds new and surprising skills to the player when required. This makes the player much more realistic and physically demanding to control. This also means that players who are not elite footballers but manage to control the ball in high-risk situations with a combination of ball and player movements, are still going to have a competitive advantage over opponents who rely on pure technical skills and power to control the ball. FIFA 22 introduces a new animation system called "Motion Labels." Players can now be easily identified within match replays by their animations, such as a player who runs from cover to take a shot or a player who hits the ground after a goal. FIFA 22 introduces "Cinematic Free Kicks." This mechanic is intended to increase the player's ball-control, and make match-changing free kicks more rewarding. Sometimes, in a genuine match, you may find that your opponents' goalkeeper has time to collect the ball before it hits the ground. This may change the whole tactical aspect of a match. With Cinematic Free Kicks, players can take a shot from 35m away from goal as a reaction to a block from the goalkeeper. FIFA 22 introduces "Goalkeeper controls." It allows you to dive to prevent shots from being saved. FIFA 22 features the most advanced tracking and directional controls in FIFA history. Players can now catch, pass, cross and shoot with the precision never before seen in soccer simulation games. Players can look at the direction of the ball from the corner of the eye, and move their body accordingly to receive and initiate a pass. When you cut inside the keeper, the camera switches to tracking your movement, making it easier for you to decide where to move the ball. The other main movement control is "directional follow-throughs." When you move, the ball moves accordingly, allowing you to control the ball with more finesse. Players can move towards the ball, dive to stop a shot and move the ball accurately using light touches. Just like FIFA 17, FIFA 22 adds a new mouse-controlled "Dynamic Free

What's new in Fifa 22:

- **New Team Skills - New team skills not only help your teams win matches, but they give your players more movement options. New passing options, like the increased passing angle, help players make smarter, more precise passes. Flex passes can be thrown at a higher arc - giving your player a different kind of angle. Possession of the ball is now more complex, as it is now centralised more into the player's control rather than taking place around the touchline. Passes are also easier to control, with pass speeds now increasing as the ball comes out of the control of the opposing player. Match day team instructions inform players of key rules and strategies.**
- **New goalkeepers - Goalkeepers now make key passes and have the ability to correct situations if they are unable to reach ball with their feet. Goalkeepers are more dynamic now and can rush off their line to intercept passes. Goalkeepers can now use reactive mobility to chase down the ball. The Brazilian boots system now has toeboot and outtoe options. Keepers are given increased coverage of their box.**
- **New mobility features - Completely updated mobility. Players now have a weight-dependent variation and collision deactivation in ball contacts. Players now have different controller base colliders, for increased accuracy, and enhanced temporal distances. Players have more control over mental and physical fatigue. Improved first touch features are now available.**
- **New on-pitch animations. New deactivated body parts, like elbows, now gracefully caress the ground. New animations that include the lacing and tying of boots and gloves. New yellow lines help fans understand ground conditions at the touchline. New "tic" and "stick" appearances. New body parts created for diving penalties.**
- **New stadium enhancements - New venues have their own**

-
- **stadium looks and include the ability to develop upward. New goalkeepers can also ventilate or heat the stadium.**
 - **Significant visuals improvements - Enhanced visual effects make stadiums and players pop out of the screen. Ball control has been improved. Stadium elements are more detailed. In-game tool tips will now pop-up when you want to know what a particular option or action does. Squad screen graphics are more clearer and precise. New kits can now be updated or improved. New goalkeeper animations. New team line-ups and tactics. New shorts, socks, socks**

FIFA is a series of association football video games published by Electronic Arts. As of 2010, there have been ten main series of FIFA, with two spin-off series, FIFA Street in 2001 and FIFA Street 2 in 2003. FIFA Football EA's first association football video game (released in September 1992), it was created by David Rutter, Peter Emslie, and Robert "Sly" Lamoureux. The game features single-player, career, and multiplayer modes. The career mode allows the player to create their player with real-life team movements and club histories, and also introduces a story line and encourages the player to compete against other people's created players, as well as local versus CPU matches, which players can compete against in a series of matches. The game also features the player scouts system. A lot of changes were made from the first version, mainly a new roster management system called "Goalkeeper Coach", which, in addition to enabling players to coach their goalkeepers, also provides a ratings system for players with favourable attributes, and the ability to create rival teams with the rival AI system, which was added by EA in its Electronic Arts Sports game Total Football in 1995. More changes came in 1994, with a new multiplayer mode called "Futball", which is based on the year that FIFA was released in, and new gameplay features such as headers, barrelling into the goal, and the ability to

accept short corner kicks, the latter by EA who redesigned the way the ball snaps in a player's feet. The difference between the controller and joysticks used to be that you could now hold one of the sticks away from your body and the game would recognise it as a pass. This is disabled in the Virtual Trainer mode of the game. FIFA was the first game to have a licensing system, allowing games outside of the FIFA series (e.g. EA Sport's Total Football and FIFA World Cup editions) to have the same license, and starting with FIFA 95, the games share the same feature set. FIFA 95 EA Sport's first football simulation game (released in December 1993), it was created by David Rutter, Alan McNeil and Robert "Sly" Lamoureux, in association with The Summit Group and Accolade. In FIFA 95, the roster management systems were expanded to include "Coach Mode", which is similar to the "Manager Mode" in Pro Clubs 95.
