The images can be copied to the Clipboard, rotated to different angles, and you can also view details about each photo, such as file name, width, height, camera model, shutter speed, ISO rating and others. You can resize, crop, zoom in or out, enable the red eye removal option, and apply different special effects (sepia, grayscale). You can also set a password and save your documents by choosing a default output format (JPEG, PNG, TIFF or BMP). It comes with advanced features, such as random access, so you can jump to any file in the list, crop the image by setting the width and height parameters, and rotate the images. You can also erase the preview image on your screen, and adjust the brightness, contrast, and saturation levels, as well as pick the quick crop to make an exact resizing of the picture. PhotoViz contains many special effects, letting you emulate sepia, classic, vintage, and many others. Also, you can set up a password and create an encryption key, hide files by specifying a security code, preview the result, and more. The application will list all the saved files and folders in the list, and it will display their details (file name, width, height, camera model, shutter speed, ISO rating and others). Furthermore, the control panel is equipped with a thumbnail view, so you will be able to know quickly the images that are selected. A utility is included, which is designed to automatically enhance your images (Auto Image adjustment). You can also perform red eye correction, adjust the image level of brightness, contrast, and saturation, as well as resize, crop, rotate and format the selected images. The application can also open multiple images at once (batch processing). Also, you will have access to advanced features, such as random access, quick crop, list, preview, encryption, and more. PhotoViz is a basic photo editor that can be used as a batch processing tool.
