If you're new to Photoshop, grab our friend and classic image manipulator, Photoshop Elements, a free version of Photoshop that comes with a collection of filters, layers, and tutorials and offers you the ability to modify images with very little resources. (See the nearby sidebar for more information on Photoshop Elements.) Photoshop Elements: Getting a Click and a Print Photoshop Elements 12 is an all-purpose, less-expensive version of Photoshop (as discussed in the previous section) that comes with some editing tools — Color Burn, Gaussian Blur, and Red Eye — and basic image editing features — Cut, Copy, and Paste, Unsharp Mask, and Hue/Saturation. (You can read about some of its features in Chapter 5.) It also has layers, including layers that support transparency, so you can create simple and complex effects with multiple layers to get more control over what's going on in an image. If you can use a word processor or spreadsheet, you can use Photoshop Elements. Even though Photoshop Elements is a free version of Photoshop, I recommend purchasing it so that you can access the features you need on a computer that's readily accessible (as opposed to a laptop computer you need to take with you) and have up-to-date software so that you can immediately download updates to the software. (You can't download updates in Photoshop Elements.) Figure 14-3 shows a typical example of an image in Photoshop Elements that has a red eye effect applied. It's a simple effect that just makes the subject's eyes red. It's a quick fix to make your subject's eyes look better. **Figure 14-3:** Use the red eye tool to repair eyes that appear too red. To apply a red eye effect to your image, open the subject's eyes with the Rectangular Marquee tool (M) and then click the Retouch option (second icon in bottom-left corner of the tool) and click the red eye option. See Figure 14-4. If needed, click the Paint Bucket tool to fill in the eyes to make them more prominent. **Figure 14-4:** Click the red eye option to use the Red Eye tool. You can use the filter effects that are built into Photoshop Elements to create effects like the one in Figure 14-5. These filters enable you to adjust a subject's skin tone, change the type of skin, lighten or darken the skin, brighten or darken

Bluhm et al U.S. Pat. No. 4,609,664 describes a process for treating an alkaline sulfate pulp, in which the pulp is treated in an aqueous liquor to give an Lye-strength-value of at least 40 at 50 grams/L. lye. The pulp is thus treated to a desired Lye-strength-value. The invention is preferably carried out at a consistency of 1 to 25% of active pulp in a pulp vessel, and the pulp is preferably separated from the liquor at a pulp consistency of 2 to 15%. The invention is thus preferably carried out at a consistency at which the pulp is in the form of a pulp mat. The alkaline pulp is preferably pretreated in a first digester to a desired alkalinity. The desired alkalinity is preferably at least 8, and the process preferably comprises treating the pulp in 2-8, and more preferably 3-5, stages. The pulp is preferably pretreated in a counterflow, descending mode within the first digester. The pretreatment is generally carried out in a counterflow, descending mode in the first digester or in a separate pretreatment stage, or both. In the second digester, a counterflow, descending mode is preferably not employed, and the pulp is preferably transferred from the first digester to the second digester in a downflow, ascending mode. The pretreatment of the pulp is preferably carried out such that the pulp is kept in a full boil state in the first digester, so as to avoid excessive penetration of the alkaline solution in the pulp. The pulp is preferably pretreated such that the pH of the pulp in the first digester is between 12 and 14, and preferably 13 and 14. The pH of the pulp in the second digester is typically adjusted to between 13 and 14. The pretreatment is preferably carried out such that the pulp is kept in a full boil state in the pretreatment stage, which is preferably a continuous digester, and preferably comprises a downflow, ascending mode. The process is carried out such that the pulp is kept in a full boil state [Treatment of primary hypothyroidism: thyroid hormones, specific agonists, and specific antagonists].
