The tips in this article were gathered from successful Photoshop users who provide Photoshop support and tutorials on sites such as Photoshop Source, Photoshop User and Adobenote. Tip #1 – Set up a workspace There are a lot of great free and paid workspace options available on the market today. It's worth the time and money spent on customizing your workspace to stay productive and organized. Photoshop workspaces are a fantastic way to enhance your workflow and speed up your editing. One can use them to organize modules, preset filters, palettes and so on. The best way to organize and create workspaces in Photoshop is to use similar methods used for organization and workflow in the real world. The advantages of using Photoshop as a standalone app are that it allows multiple, easy to use workspaces to be assigned at once. The disadvantages are that Photoshop has limited workspaces. Field of the Invention The present invention generally relates to a storage device, and more specifically, to a storage device which can detect a remaining amount of rewritable information stored in a removable storage medium and can detect whether or not a recordable portion is left in the removable storage medium. Description of the Related Art A storage device which can be operated by being attached to an image forming apparatus, such as a printer, a multifunction device, a digital copying machine, etc., is provided (hereinafter, referred to as a storage device). The storage device can provide an image forming apparatus, such as an inkjet printer, with data which can be stored in the storage device. The data can be transferred from the storage device to the image forming apparatus and stored in a non-volatile manner in a storage region formed in a removable storage medium, such as a memory card, which is removably attached to the storage device. It is known that there is a storage device which can detect the remaining amount of the data stored in the removable storage medium. For example, Japanese Laid-open Patent Publication No. 2014-181911 proposes a storage device which can detect the remaining amount of the data stored in the removable storage medium based on a value provided to the storage device by a user. Japanese Laid-open Patent Publication No. 2014-181911 also proposes that the storage device can obtain the remaining amount based on a value provided by the removable storage medium which is read by the storage device, and a value provided by the user which the storage device has received through communication with a controller of the removable storage medium. However, as for the method described in Japanese Laid-open Patent Publication No. 2014-181911, if the value provided by the user can be verified, it is necessary for the storage device to obtain the value through communication with the removable storage medium. Consequently, a part of the storage device including a communication circuit, which is a component to perform communication with the removable storage medium, needs to be provided with an energy supply to perform communication with the removable storage medium. Meanwhile, it is possible to easily obtain a value from the removable storage medium. In this case, it is not necessary to provide the energy supply, the communication circuit, and the like in the storage device to detect the remaining amount, or a part of the storage device may be provided with a communication circuit for communicating with the removable storage medium. In the former case, however, the entire storage device
